

NEW GENERATION COLLATOR FOR A2+ SHEET HANDLING

THE BENEFITS...

highly productive, flexible system, and easy to operate

handles large range of paper types and weights

large capacity therefore less stoppage for re-loading

adjustable backstops enable handling of smaller sheets

paper trays conveniently loaded at waist height

what our customers say...

“ Everyone here is very impressed with the build quality of the machine, it's a real credit to all concerned. It looks and feels of very high quality and every component is superb. It's run faultlessly and we've already noticed a significant drop in waste sheets. You should all be very proud of your efforts, we certainly are! If you have any prospective clients considering this machine, pass them on to me and I'll tell them how pleased I am and will definitely recommend they buy one as well. ”

David George, Managing Director, Peters Design & Print

After spending a few months researching equipment, David found most of the alternatives to be either over engineered (and therefore complicated) or having a very large footprint. Additionally, his need for a cross folder for newsprint was met with a lukewarm response from manufacturers. MSA relished this challenge and were happy to provide a solution to his requirements.

DESIGNED FOR COLLATING SMALL TO MEDIUM PRINT RUN NEWSPAPER, OR OTHER SIMILAR SHEET STOCK, PROVIDING USERS WITH A FLEXIBLE AND EFFICIENT SYSTEM

The CKF (Cross Knife Fold) System has been designed for folding small to medium print run newspapers, or other similar sheet stock. It's dedicated for use with the MSA HSB Collator, but can also be supplied with it's own PLC controls for standalone applications.
